Cycle Infrastructure Design - Great Britain. Department for Transport 2008

Encouraging more people to cycle is increasingly being seen as a vital part of any local authority plan to tackle congestion, improve air quality, promote physical activity and improve accessibility. This design guide brings together and updates guidance previously available in a number of draft Local Transport Notes and other documents. Although the focus is the design of cycle infrastructure, parts of its advice are equally appropriate to improving conditions for pedestrians. Individual chapters cover: general design parameters; signing issues; network management; reducing vehicle speeds on cycle routes; bus and tram routes; cycle lanes; off-road cycle routes; junctions; cycle track crossings; cycle parking; public transport integration. A list of references and an appendix of related publications complete the book. It is hoped that, by bringing together relevant advice in a single document, this guide will make it easier for local authorities to decide what provision, if any, is required to encourage more people to cycle.

Robot Rules - Jacob Turner 2018-10-29

This book explains why AI is unique, what legal and ethical problems it could cause, and how we can address them. It argues that AI is unlike any other previous technology, owing to its ability to take decisions independently and unpredictably. This gives rise to three issues: responsibility--who is liable if AI causes harm; rights--the disputed moral and pragmatic grounds for granting AI legal personality; and the ethics surrounding the decision-making of AI. The book suggests that in order to address these questions we need to develop new institutions and regulations on a cross-industry and international level. Incorporating clear explanations of complex topics, Robot Rules will appeal to a multi-disciplinary audience, from those with an interest in law, politics and philosophy, to computer programming, engineering and neuroscience.

Policy Instruments for Environmental and Natural Resource Management - Thomas Professor Sterner 2010-09-30

As Thomas Sterner points out, the economic 'toolkit' for dealing with environmental problems has become formidable. It includes taxes, charges, permits, deposit-refund systems, labeling, and other information disclosure mechanisms. Though not all these devices are widely used, empirical application has started within some sectors, and we are beginning to see the first systematic efforts at an advanced policy design that takes due account of market-based incentives. Sterner's book encourages more widespread and careful use of economic policy instruments. Intended primarily for application in developing and transitional countries, the book compares the accumulated experiences of the use of economic policy instruments in the U.S. and Europe, as well as in select rich and poor countries in Asia, Africa, and Latin America.

Ambitious in scope, the book discusses the design of instruments that can be employed in a wide range of contexts, including transportation, industrial pollution, water pricing, waste, fisheries, forests, and agriculture. Policy Instruments for Environmental and Natural Resource Management is deeply rooted in economics but also informed by perspectives drawn from political, legal, ecological, and psychological research. Sterner notes that, in addition to meeting requirements for efficiency, the selection and design of policy instruments must satisfy criteria involving equity and political acceptability. He is careful to distinguish between the well-designed plans of policymakers and the resulting behavior of society. Understanding the Global Energy Crisis - Richard A. Simmons
2014-03-15

We are facing a global energy crisis caused by world population growth, an escalating increase in demand, and continued dependence on fossil-based fuels for generation. It is widely accepted that increases in greenhouse gas concentration levels, if not reversed, will result in major changes to world climate with consequential effects on our society and economy. This is just the kind of intractable problem that Purdue University's Global Policy Research Institute seeks to address in the Purdue Studies in Public Policy series by promoting the engagement between policy makers and experts in fields such as engineering and technology. Major steps forward in the development and use of technology are required. In order to achieve solutions of the required scale and magnitude within a limited timeline, it is essential that engineers be not only technologically-adept but also aware of the wider social and political issues that policy-makers face. Likewise, it is also imperative that policy makers liaise closely with the academic community in order to realize advances. This book is designed to bridge the gap between these two groups, with a particular emphasis on educating the socially-conscious engineers and technologists of the future. In this accessibly-written volume, central issues in global energy are discussed through interdisciplinary dialogue between experts from both North America and Europe. The first section provides an overview of the nature of the global energy crisis approached from historical, political, and sociocultural perspectives. In the second section, expert contributors outline the technology and policy issues facing the development of major conventional and renewable energy sources. The third and final section explores policy and technology challenges and opportunities in the distribution and consumption of energy, in sectors such as transportation and the built environment. The book's epilogue suggests some future scenarios in energy distribution and use.

Access Management Manual - Kristine Williams 2014

"Since the publication of the first edition of the Access Management Manual, the context for transportation planning and roadway design in

the United States has been transformed. Transportation agencies and local governments are under growing pressure to integrate land use and transportation policy and achieve a more sustainable, energy-efficient transportation system. This second edition of the manual responds to these developments by addressing access management comprehensively, as a critical part of network and land use planning. The content is interdisciplinary, with guidance pertinent to various levels of government as well as to pedestrians, bicyclists, and motorized vehicles, including trucks and buses, and is strongly grounded in decades of research, engineering science, and professional experience. Greater emphasis is placed on appropriate location of access, and guidance is refined to provide appropriate consideration of context and community issues. Substantial updates aid state and local agencies in managing access to corridor development effectively. Specific guidance on network and circulation planning and modal considerations is included, as well as guidance on effective site access and circulation design. A chapter on corridor management reinforces these concepts with a framework for application of access management in different contexts, along with appropriate strategies for each context. There are also new chapters on network planning, regional access management policies and programs, interchange area access management, auxiliary lane warrants and design, and right-of-way and access control. The manual concludes with an extensive menu of access management techniques and information on their application"--Provided by publisher.

Minerals of Georgia - Robert B. Cook 2016

Minerals of Georgia presents an illustrated, alphabetized record of every mineral (or mineral group) identified in the state. Under each entry is a county-by-county listing of every occurrence known, including both widespread species and obscure ones. In addition to economically important mineral deposits, this volume covers various mineral localities within the state that are well known among professional mineralogists,

mineral collectors, and rockhounds as the source of outstanding study, display, and lapidary material. Illustrated with over 150 color photographs this guide provides the most current listings and descriptions of mineral occurrences and mining activities documented in Georgia over the past 150 years. Minerals of Georgia will be invaluable to the mineralogist, collector, and researcher with its definitive and updated listings of the distribution and specific localities of a mineral, the mineral's association and geologic setting, and the varied mineralogy of a particular county or mineral district. Even the casual reader will gain a better appreciation of Georgia's diverse mineral treasures.

World Report on Road Traffic Injury Prevention - Organisation mondiale de la santé 2004-03-23

Every day, thousands of people are killed and injured on roads around

the world, with the costs of this growing, but largely preventable, public health concern disproportionately affecting vulnerable social groups and developing countries. In order to address these issues, the World Health Organization and the World Bank have produced this joint report on road traffic injury prevention, based on the collaborative contributions of experts and institutions, from all continents and different sectors, including transport, engineering, health, police, education and civil society. It presents a comprehensive overview of the magnitude, risk factors and impact of road traffic injuries, and about ways to prevent and lessen the impact of road crashes.

AASHTO Transportation Glossary - 2009

"The 2009 AASHTO Transportation Glossary is an update and revision of the 1983 Transportation Glossary and the 1998 Transportation Glossary, which was unpublished. The largest additions in terminology were in bridge and drainage subjects. The new Glossary also includes lists of organizational acronyms, abbreviations, and other glossary references. Terms and definitions in this glossary were taken from an unpublished 1998 AASHTO Glossary and supplemented with definitions listed in AASHTO publications issued after 1998. Several additional sources were also referenced, including the Highway Capacity Manual, Manual on Uniform Traffic Control Devices, Code of Federal Regulations-Title 23, an FHWA list of roundabout terminology, and the Transportation Research Thesaurus. Glossary terms are listed in alphabetical order regardless of transportation mode. However, the glossary also includes two indexes- subject area and keyword-which provide cross references for the user."-- AASHTO Bookstore website (viewed June 24, 2).

Europe and the Black Sea Region - Dominik Gutmeyr 2019-05

When the scientific study of the Black Sea Region began in the late 18th and early 19th centuries, initially commissioned by adjacent powers such as the Habsburg and the Russian empires, this terra incognita was not yet considered part of Europe. The eighteen chapters of this volume show a broad range of thematic foci and theoretical approaches - the result of the enormous richness of the European macrocosm and the BSR. The microcosms of the many different case studies under scrutiny,

however, demonstrate the historical dimension of exchange between the allegedly opposite poles of 'East' and 'West' and underscore the importance of mutual influences in the development of Europe and the BSR.

Free Culture - Lawrence Lessig 2016-07-30

Lawrence Lessig, "the most important thinker on intellectual property in the Internet era", masterfully argues that never before in human history has the power to control creative progress been so concentrated in the hands of the powerful few, the so-called Big Media. Never before have the cultural powers- that-be been able to exert such control over what we can and can't do with the culture around us. Our society defends free markets and free speech; why then does it permit such top-down control? To lose our long tradition of free culture, Lawrence Lessig shows us, is to lose our freedom to create, our freedom to build, and, ultimately, our freedom to imagine.

The Road to Unfreedom - Timothy Snyder 2019-04-09

NEW YORK TIMES BESTSELLER • From the author of *On Tyranny* comes a stunning new chronicle of the rise of authoritarianism from Russia to Europe and America. “A brilliant analysis of our time.”—Karl Ove Knausgaard, *The New Yorker* With the end of the Cold War, the victory of liberal democracy seemed final. Observers declared the end of history, confident in a peaceful, globalized future. This faith was misplaced. Authoritarianism returned to Russia, as Vladimir Putin found fascist ideas that could be used to justify rule by the wealthy. In the 2010s, it has spread from east to west, aided by Russian warfare in Ukraine and cyberwar in Europe and the United States. Russia found allies among nationalists, oligarchs, and radicals everywhere, and its drive to dissolve Western institutions, states, and values found resonance within the West itself. The rise of populism, the British vote against the EU, and the election of Donald Trump were all Russian goals, but their achievement reveals the vulnerability of Western societies. In this forceful and unsparing work of contemporary history, based on vast research as well as personal reporting, Snyder goes beyond the headlines to expose the true nature of the threat to democracy and law. To understand the challenge is to see, and perhaps renew, the fundamental political virtues offered by tradition and demanded by the future. By revealing the stark choices before us—between equality or oligarchy, individuality or totality, truth and falsehood—Snyder restores our understanding of the basis of our way of life, offering a way forward in a time of terrible uncertainty.

Programming Challenges - Steven S Skiena 2006-04-18

There are many distinct pleasures associated with computer programming. Craftsmanship has its quiet rewards, the satisfaction that comes from building a useful object and making it work. Excitement arrives with the flash of insight that cracks a previously intractable problem. The spiritual quest for elegance can turn the hacker into an artist. There are pleasures in parsimony, in squeezing the last drop of performance out of clever algorithms and tight coding. The games, puzzles, and challenges of problems from international programming competitions are a great way to experience these pleasures while improving your algorithmic and coding skills. This book contains over 100 problems that have appeared in previous programming contests, along with discussions of the theory and ideas necessary to attack them. Instant online grading for all of these problems is available from two WWW robot judging sites. Combining this book with a judge gives an exciting new way to challenge and improve your programming skills. This book can be used for self-study, for teaching innovative courses in algorithms and programming, and in training for international competition. The problems in this book have been selected from over 1,000 programming problems at the Universidad de Valladolid online judge. The judge has ruled on well over one million submissions from 27,000 registered users around the world to date. We have taken only the best of the best, the most fun, exciting, and interesting problems available.
