Saber-tooth Curriculum - J.

Abner Peddiwell 1939

"A classic of educational
criticism proves its relevance
in light of today's educational
quandaries First published by
McGraw-Hill in 1939, The
Saber-Tooth Curriculum was a
groundbreaking satire of the
educational establishment, and
its unwillingness to adapt to
changing times. Throughout
the decades, this witty work
has not only become an
educational classic, but has
also remained as relevant and

applicable to the key questions
in education today as it was
when first published. With
tongue firmly in cheek,
Peddiwell takes on the
conflicting philosophies of
education, from its imagined
origins at the dawn of time to
its culmination in a ritualistic,
deeply entrenched social
institution with rigidly
prescribed norms and
procedures. Developed within a
fanciful framework of fictional
lectures, given by fictional
author Professor J. Abner
Peddiwell, doyen in the History
of Education at Petaluma State
College, this humorous fable
illustrates the progress of
education and gives valuable
insights into how it could
continue to develop in the
decades to come."--desc. of

Educating the Student Body - Committee on Physical Activity and Physical Education in the School Environment 2013-11-13

Physical inactivity is a key determinant of health across the lifespan. A lack of activity increases the risk of heart disease, colon and breast cancer, diabetes mellitus, hypertension, osteoporosis, anxiety and depression and others diseases. Emerging literature has suggested that in terms of mortality, the global population health burden of physical inactivity approaches that of cigarette smoking. The prevalence and substantial disease risk associated with physical inactivity has been described as a pandemic. The prevalence, health impact, and evidence of changeability all

have resulted in calls for action to increase physical activity across the lifespan. In response to the need to find ways to make physical activity a health priority for youth, the Institute of Medicine's Committee on Physical Activity and Physical Education in the School Environment was formed. Its purpose was to review the current status of physical activity and physical education in the school environment, including before, during, and after school, and examine the influences of physical activity and physical education on the short and long term physical, cognitive and brain, and psychosocial health and development of children and adolescents. Educating the Student Body makes recommendations about approaches for strengthening and improving programs and policies for physical activity and physical education in the school environment. This report lays out a set of guiding principles to guide its work on these tasks. These included: recognizing the benefits of

instilling life-long physical activity habits in children; the value of using systems thinking in improving physical activity and physical education in the school environment; the recognition of current disparities in opportunities and the need to achieve equity in physical activity and physical education; the importance of considering all types of school environments; the need to take into consideration the diversity of students as recommendations are developed. This report will be of interest to local and national policymakers, school officials, teachers, and the education community, researchers, professional organizations, and parents interested in physical activity, physical education, and health for school-aged children and adolescents.
