Joe Wilson and the Creation of Xerox - Charles D. Ellis 2011-08-31
"Charley Ellis has written a magnificent portrait, capturing the indomitable spirit of Joe Wilson and his instinctive understanding of the need for and commercial usefulness of a transforming imaging technology. Joe Wilson and his extraordinary team, which I had the good fortune to first meet in 1960, epitomized the wonderful observation of George Bernard Shaw who said, 'Some look at things that are, and ask why? I dream of things that never were and ask why not?' Xerox and xerography are not only a part of our vocabulary, but part of our everyday life. Charley Ellis gives the reader a poignant understanding of just how this happened through the life, adventures, critical business decisions, and dreams of Joseph Wilson and a cadre of remarkable individuals. This book will surely join the library of memorable biographies that capture the building of America into a risk-tolerant, technologically sophisticated, idea-oriented society that thrives by understanding what Charles Darwin really said: 'Survival will be neither to the strongest of the species, nor to the most intelligent, but to those most adaptable to change.'" —Frederick Frank, Vice Chairman, Lehman Brothers Inc.

Radar Instruction Manual - United States. Maritime Administration 2005
Since 1958 the Maritime Administration has continuously conducted instructions in use of collision avoidance radar for qualified U.S. seafaring personnel and representatives of interested Federal and State Agencies.Beginning in 1963, to facilitate the expansion of training capabilities and at the same time to provide the most modern techniques in training methods, radar simulators were installed in Maritime Administration?s three region schools.It soon became apparent that to properly instruct the trainees, even with the advanced equipment, a standardize up-to-date instruction manual was needed. The first manual was later revised to serve both as a classroom textbook and as an onboard reference handbook.This newly updated manual, the fourth revision, in keeping with Maritime Administration policy, has been restructured to include improved and more effective methods of plotting techniques for use in Ocean, Great Lakes, Coastwise and Inland Waters navigation.Robert J. No Trespassing - Eva Hemmungs Wirtén
2004-01-01
In this scholarly yet highly accessible work, Eva Hemmungs Wirtén traces three main themes within the scope of cultural ownership: authorship as one of the basic features of print culture, the use of intellectual property rights as a privileged instrument of control, and finally globalization as a pre-condition under which both operate. Underwritten by rapid technological change and increased global interdependence, intellectual property rights are designed to protect a production that is no longer industrial, but informational. No Trespassing tells the story of a century of profound change in cultural ownership. It begins with late nineteenth-century Europe, exploring cultural ownership in a number of settings across both spatial and temporal divides, and concludes in today's global, knowledge-based society. Wirtén takes an interdisciplinary and international approach, using a wide array of material from court cases to novels for her purposes. From Victor Hugo and the 1886 Berne Convention, to the translation of Peter Høeg's bestseller Smilla's Sense of Snow, Wirtén charts a history of Intellectual property rights and regulations. She addresses the relationship between author and translator, looks at the challenges to intellectual property by the arrival of the photocopier, takes into account the media conglomerate's search for content as a key asset since the 1960s, and considers how a Western

legal framework interacts with attempts to protect traditional knowledge and folklore. No Trespassing is essential reading for all who care about culture and the future regulatory structures of access to it.

Calcium Measurement Methods - Alexei Verkhratsky 2009-12-17
Since the introduction of fluorescent calcium indicators and the subsequent development of capacities for real-time monitoring and imaging of calcium movements in the intact cells studied in isolation, in situ and in vivo, the complex and vital calcium signaling system has been illuminated, proving calcium signals to be excellent universal reporters of cellular activity. In "Calcium Measurement Methods", a team of renowned experts in the field contribute methods dedicated to calcium imaging in neural cells with a balance between the main principles of calcium imaging and specific applications of the technique to neural tissues. The book's

contents show how the combination of different indicators and recently developed microscopic techniques lead to spectacular successes in the imaging of neural cells in the living brain in both physiological and pathophysiological models. As a volume in the successful NeuromethodsTM series, the chapters provide authoritative reviews including up-to-date detailed protocols of the most commonly used approaches in the field. Cutting-edge and concise, "Calcium Measurement Methods" serves as an ideal reference to aid the many scientists worldwide engaged in calcium imaging of the nervous system.

How Schools Work - Rebecca Barr 1983
As budgets tighten for school districts, a sound understanding of just how teaching and administration translate into student learning becomes increasingly important. Rebecca Barr, a researcher of classroom instruction and reading skill development, and Robert Dreeben, a sociologist of education who analyzes the structure of organizations, combine their expertise to explore the social organization of schools and classrooms, the division of labor, and the allocation of key resources. Viewing schools as part of a social organization with a hierarchy of levels—district, school, classroom, instructional group, and students—avoids the common pitfalls of lumping together any and all possible influences on student learning without regard to the actual processes of the classroom. Barr and Dreeben systematically explain how instructional groups originate, form, and change over time. Focusing on first grade reading instruction, their study shows that individual reading aptitude actually has little direct relation to group reading achievement and virtually none to the coverage of reading materials once the mean aptitude of groups is taken into consideration. Individual aptitude, they argue, is rather the basis on which teachers form reading groups that are given different instructional treatment. It is these differences in group treatment, they contend, that explain substantial differences in learning curricular material.

The Evolution of American Urban Society - Howard P. Chudacoff 1975

Copies in Seconds - David Owen 2008-06-30
The first plain-paper office copier -- which was introduced in 1960 and has been called the most successful product ever marketed in America -- is unusual among major high-technology inventions in that its central process was conceived by a single person. David Owen's fascinating narrative tells the story of the machine nobody thought we needed but now we can't live without. Chester Carlson grew up in unspeakable poverty, worked his way through junior college and the California Institute of Technology, and made his discovery in solitude in the depths of the Great Depression. He offered his big idea to two dozen major corporations -- among them IBM, RCA, and General Electric -- all of which turned him down. So persistent was this failure of capitalist vision that by the time the Xerox 914 was manufactured by an obscure photographic-supply company in Rochester, New York, Carlson's original patent had expired. Xerography was so unusual and nonintuitive that

it conceivably could have been overlooked entirely. Scientists who visited the drafty warehouses where the first machines were built sometimes doubted that Carlson's invention was even theoretically feasible. Drawing on interviews, Xerox company archives, and the private papers of the Carlson family, David Owen has woven together a fascinating and instructive story about persistence, courage, and technological innovation -- a story that has never before been fully told.
